

You will require a minimum of eight strap sets per dome, two per weight plate. Each strap set includes two fabric strips with a stainless steel D ring on both ends and an 8mm snap hook carabiner.

Each strap set will arrive with you configured as shown in images 4-6 adjacent, but you will need to take this apart to feed around the weight plate handle when set up for the first time. After this the straps can remain on each weight plate (as shown in image 3).

N.B. Weight Plate Attachment Straps work best with smaller X1s (3x3m to 5x5m). For larger domes where more weights are required, we would encourage you to purchase the X1 Securing Plates. If you are unsure on the best weight solution for your event set up, please contact our Sales Team.
