

01. Unzip and fold away all the walls.
02. Remove the weight plates from the zip pockets in the two front legs.
03. Open the valve cap and push the spring button in the centre to open the valve.
04. With a person on each of the two front legs, sweep them under the spider dome so that the unit falls into a semi-circular position.
05. Remove the remaining weight plates from the zip pockets in the two back legs.
06. Set the pump to the deflate setting with the inflate/deflate nozzle attached.
07. Insert the nozzle and turn the pump on to extract as much of the remaining air from the unit as possible, then turn off the pump and close the valve.
08. Manoeuvre both persons to lift and fold over two legs.
09. All four legs should now be placed on top of each other.
10. Roll from the top of the dome down towards the feet. You can then open the valve to pump out any remaining air if needed.
11. Slide the rolled up spider dome into the bag and add any walls & accessories.
12. Zip up the bag and remove the groundsheet (store separately). If the spider dome is still damp when packed away, please ensure it is dried at room temperature within 48hrs.

For more detailed instructions on how to use the pump, please refer to page 3.
