

1. The Tie-down kit comprises of 4x ratchets, 4x pegs and a carry bag.
2. Loop the strap around the truss bar or leg and back through itself (do NOT fix to the 'D' rings on the corner of the canopy, as this could cause damage to the canopy and will be less secure).
3. Attach the other end with the carabiner/snap hook to either the 30cm steel pegs (soft ground), or surrounding structures like fences, weights and vehicles.
4. Tighten the ratchets using the cam buckle adjuster until taut.
